

free2create

Show your support for your local library by making your own Free2 T-shirt!
Find directions and designs below:

Safety first!

Make sure that you have adult supervision when making your Free2 T-shirt.

What you'll need:

- One T-shirt (100% preshrunk cotton, 50/50 blends or 100% polyester fabric.
- One pack of iron-on, T-shirt transfer sheets (Transfers may be purchased at your local craft store or check out these online suppliers: www.avery.com, www.canon.com, www.epson.com)
- One iron
- A flat, heat safe surface
- One pair of scissors
- An adult and a friend

Directions:

- Place iron-on transfer paper in the printer so that the image will print on the coated side.
- Most heat-transfer instructions direct you to flip your image before ironing on. However, the artwork for the Free2 T-shirt has been pre-flipped for your convenience! So no need to flip the design.
- Print out one of the "Free2 Make Your Own T-shirt" designs, page 2-9 of this document.
- Lay out your T-shirt on a flat heat safe surface, be sure that the place where you want to put the design is flat and visible.
- Measure the Free2 design on the T-shirt.
- Using the guide lines provided, cut away any blank or unwanted space of the iron-on transfer paper while leaving some space around the design.
- Follow the directions from the iron-on transfer paper in order to transfer the design.
- Follow the directions on the iron-on transfer paper for laundering and care.
- Wear your new Free2 T-shirt with pride... and tell your friends!

* Iron on transfers are just images flipped around so they look like a mirror image. If you look at the Free2 on the page before you transfer them to a T-shirt, they all look backwards. **This is NOT a mistake**, it's how the transfer must be for it to come out right on the T-shirt. Be sure to test your design on regular paper with your printer set to "iron on transfer" to be sure that the template comes out correctly- backwards, that is!
